

# Quartz Stone Crushing And Grinding

## Hazardous For Life Of Workers

Hazards arising from Quartz stone crushing and grinding cause fatal occupational diseases like Silicosis (Lung cancer) which may cause to death.

### Safety Precautions:

- ▶ Inhaled Silica dust can disfunction lungs, hence it is must to cover your mouth and nose with an appropriate mask.
- ▶ Secure whole production process and machinery on technical basis, so that no worker should be effected.
- ▶ If any worker is asked to work without safety precautions, he should refuse/make complain.
- ▶ Do not put your life at risk for petty benefit.
- ▶ Display safety signs and safety posters at workplace.
- ▶ Doing this kind of works without adopting safety precautions could be fatal and life threatening.
- ▶ It is crime by law to continue the work without adopting safety precautions upon which owners are reliable to be held for fine and punishment by conviction.
- ▶ Remove dust with particular method i.e vaccuming.
- ▶ All workers should be trained regularly and should be imparted awareness regarding hazards of Silica.

Please remember this is not ordinary dust, if the dust is of Silica or sand dust.

**Remember:**  
Safety of  
worker's life is  
your liability.

**Adopt Safety  
precautions**
